BASIC-ABSTRACT:

NOVELTY - Provided is a manufacturing method of cemphalt having an intermediate property of cement and asphalt by mixing cement and asphalt as main materials, organic additive and aggregates at room temperature. The resultant cemphalt enables to pave roads continuously without a gap and has fluidity-resistance and impact-resistance.

DETAILED DESCRIPTION - Cemphalt is manufactured by mixing 10-20wt.% of asphalt, 10-30wt.% of cement, 30-60wt.% of coarse aggregates, 20-50wt.% of soil or fine aggregates and the balance of reinforcing fibers, where the used asphalt is prepared by mixing asphalt, water, surfactant (anionic or cationic) and organic additive such as soluble latex, emulsion, polymer (polyvinyl alcohol, polyethylene oxide, etc.) at 50-60 deg. C.
